No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                     Score

1st strand cDNA was primed with a NotI-ligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and Cloned
into the Not I and EcoR V sites of the pCMVSPRT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

Generation and initial analysis of more than 15,000 full-length
human and mouse cDNA sequences
Parally S. 16899-16903 (2002)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Clone distribution: MGC clone distribution information can be found through the I.M.A.G.B. Consortium/LIML at: http://image.llnl.gov Series: IRAK Plate: 66 Row: e Column: 10

This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 21312463
This clone has the following problem: frame shifted.

(Stratagene); Site 1: XhoI; Site 2: EcoRI; cDNA oligo
dT-primed [5'-(GA)10-ACTAGTTCGGAGTTTTTTTTTTTTTTTTTTTT] and
directionally cloned using 5' linkers 5'-AATTCGGCAGAG-3'
and 5'-CTCGTGCGG-3'. Size selection of >400bp material
gives average insert size ranging from 1-2 kb. Library was
mass excised (from lambda-UniZAP-XR) and resulting
single-stranded phagemids were prepped and tranformed
into DH10B. Library contains 98% recombinants.

/note="Torgan: limbs; Vector: pBluescript II KS(+); Site_1:
/note="Torgan: limbs; Vector: primary was
constructed from 1 million independent clones. cDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
/pollowing this first strand reaction, double-stranded cDNA
was blunted, ligated to NotI adapters, digested with
ECORI, size-selected, and cloned into the NotI and ECORI
compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., PNAS
(1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
(1996: 791, except that a significantly longer
reannealing hybridization was used."
